INVENTOR : HIROTA HIROMI;

INT.CL. : A47J 37/00 A47J 43/07

TITLE : AUTOMATIC BREAD MAKER

ABSTRACT : PURPOSE: To easily remove and mount a kneading container by providing a key part directed to the outside of a kneading container at a side opposite to a gripping part of a handle from the turning center of the handle to be turnably provided at the upper edge of the kneading container and providing a groove part to fit in the key part on the wall surface of a baking room.

CONSTITUTION: The title maker is equipped with a baking room 39 having a heater 28, a kneading container 23 to be mountably and removably fixed to the baking room 29 internal part, a kneading blade 24 provided in the inner bottom part of the kneading container 23, a motor 12 to rotate the kneading blade 24 and a handle 33 to be turnably provided at the upper edge of the kneading container 23. A key part 36 directed to the outside of the kneading container 23 is formed at the side opposite to a gripping part 34 of the handle 33 from the turning center of the handle 33, and simultaneously, on the wall surface of the baking room 29, a groove part 37 is formed which is composed of a longitudinal groove 37a, whose upper edge is opened, and a lateral groove 37b to be connected to it and in which the key part 36 is fitted. As a result, the kneading container can be easily removed and mounted.
